Features

- Zero Leakage
- Bi-Directional Flow
- Versatile – 3-way 2-position, 2-way Normally Closed or 2-way Normally Open
- Balanced Poppet Design
- 303 Stainless Steel or Aluminum Construction
- Minimum Current Required
- Rapid Response
- Explosion Proof Per MIL-STD-810B
- Direct Acting, Continuous Duty Coil
- High Pressure – Vacuum to 6000 psig
- High Flow Capacity

How It Works

THE ENERGIZED POSITION
With electrical energy applied to the coil, the poppet is pulled up against the normally open seat of the valve. In this condition, flow is allowed in either direction through Port B and Port C with Port A isolated.

THE DE-ENERGIZED POSITION
With the valve in a de-energized position, flow is allowed in either direction through Port A and C with Port B isolated.
