Features

• Dead Tight Sealing at Any Pressure*
• Low Cracking Pressure
• Excellent Flow Characteristics
• 100% Reliability
• Compatible with Most Fluids
• Easily Installed

Applications

• ECS & Fuel Systems where Zero Leakage is Critical or Leakage Hazardous

Technical Data

Materials of Construction

Body – 2024-T4/T351 Aluminum or 303 Stainless Steel
O-Rings – Buna N, EPR, Fluorosilicone, Neoprene, Silicone, Teflon® or Viton®

Pressure Ratings

Operating Pressure – 0 to 600 PSI (42 BAR)
Proof Pressure – 900 PSI (62 BAR)
Burst Pressure – Over 1,500 PSI (103 BAR)

* Contact factory for maximum leakage allowance with Teflon® O-ring.

How It Works

OPEN (8800 Series)**
The full flow passages and the streamlined internal configuration provide pressure drop comparable to aircraft swing check valves.

CLOSING
The floating O-ring automatically establishes line contact with the conical metal surfaces of the poppet and the seat to cushion closing and insure perfect sealing at zero pressure differential.

CLOSED
The conical sealing faces exert light tension on the I.D. of the O-ring to insure a smooth sealing surface. Pressure on the O.D. of the O-ring increases sealing efficiency as pressure increases. The O-ring automatically adjusts for swell in aircraft fluids.

Temperature Range

−80° F to +450° F; −62° C to +232° C

Notes:
On both the 8500 & 8800 Series, the poppet and end piece are hard anodized as a standard. The body gasket in the 8500 Series is 1100-H14 aluminum for use in systems with high temperatures or with liquid or gases, which would cause excessive swell or shrinkage of elastomeric compounds.

In applications where the valve poppet may see rapid cycling, or for information on special connections, O-rings, operating pressures and temperature ranges, please consult your Circle Seal Controls Representative or our factory.
